# webinar series

## Turning biomass into materials : from building blocks to agromaterials in construction

JUNE 11, 2026

1 PM – 3:30 PM CEST  
2 PM – 4:30 PM EET

# #2

The series, run jointly by the Institut international en bioéconomie et environnement EXEBIO from the University of Reims Champagne-Ardenne and the European university alliance INVEST, brings together researchers and practitioners across Europe on bioeconomy and environmental issues.

This second session explores the broad field of bio-based materials, from the use of biomass as molecular precursors to the development of agromaterials for construction. Through examples and case studies from France, Italy, Greece and Finland, the session highlights innovative approaches for valorising local biomass resources and supporting more sustainable material and building practices.
