PhD Course in Psychology, Linguistics and Cognitive Neuroscience
XXXVIII cycle, a.y. 2022/2023

Scholarship funded by Department of Psychology linked to research project: "ERC Synergy Leibnizdream"

Abstract:

These two scholarships are founded by the European Research Council Synergy project Leibnizdream (Principal Investigator: Prof. Maria Teresa Guasti) https://leibnizdream.eu/). The projects will be dealing with issues in experimental linguistics within the generative framework. Possible topics (not exhaustive list) are: expression of causality and agency, verbs of movement, connectives (and, or, if then), quantifiers (all, none, some), the expression of negation, antonyms, comparison, gradable adjectives, syntactic dependencies (questions, relative clauses and logophoricity). Oral or sign languages, preferably with a cross-linguistic dimension will be considered. Doctoral education will provide with competence in statistics, experimental methods, among other things. Candidates must have an education in linguistics, be interested in experimental works, speak English fluently. Knowledge of other languages is welcome.
