PRESENTATION

The mission of Inclusive Cloud srls is to produce IT solutions to increase the accessibility of digital content, with particular interest in the web and ebooks. The main product is the Farfalla Project software (https://farfalla-project.org), a solution that allows you to add accessibility features to any website, with a scalable business model: through a "pay as you go" distribution method, customers (ideally, any type of organisation that owns a website) will be able to benefit from the proposed solution by paying a fee commensurate with the actual volume of traffic used. The spinoff’s objectives, as potential revenue channels, also include the development of websites and the analysis of existing systems in order to improve their accessibility and compatibility with the main product.

PRODUCTS & SERVICES

The main product is based on the Open Source software "Farfalla project", which is available as a cloud-based application (SAAS). We offer consultancy services, mainly about the integration of Farfalla project in existing websites, aimed at ensuring the highest level of compatibility between the website and Farfalla project, and the best user experience as well. We specialize in the design and construction of highly accessible websites, taking care of all the design phases and of websites programming, granting maximum compatibility with Farfalla project and with the regulations in force, as well as the good practices relating to web accessibility. The business activity also includes consultancy - in a broader sense - on the accessibility of information systems of various kinds (for example, but not limited to e-learning systems, mobile applications, design of digital installations in public spaces, etc.).

Team
Andrea Mangiatordi – Research and development
Francesca Scenini – Communication and community management
Gabriele Borghesi – Design and development

Support
Self-financed

Sector
Web, Information Technology
