PROGRAM DESCRIPTION

The main aim of the XIII IEEE Topics on Microelectronics Summer School is **improving the knowledge of the participants in the field of the Microelectronics design**, facing different topics and from different perspectives as the microelectronics world is. This Summer School is then addressed to students (Master and PhD), researchers and industrial designers. The Summer School is composed by two Sessions per year. Each session consists of five long talks/lectures (3.5 h each, a sufficient time to give both overview and advanced details about the topic) given by academic professors or qualified experts coming from companies or research centers. In this way **the academic and industrial approaches for research and state-of-the art progress will be presented**. Different topics will be addressed in each course. This offers a wide-spectrum for the audience about the present challenges in the microelectronics world. The Summer School is co-organized with the Cultural Association 'InnoTech Events'; and it is supported by the IEEE Solid Circuits Society Italian Chapter.
